

SILOCK Founding Brief

Origin · Lab civilisation · private AI OS path · Public technical brief v1.0 · 16 August 2026
VF Empire Ltd · Company no. C 94160 · VAT MT26384195 · Malta · <https://si-lock.com/whitepaper/>

For buyers, partners, and sceptics. Lab-scale order of magnitude and product posture. Not a security certification. Not a clone kit. Capability classes only — no ports, host maps, tool dumps, or serving recipes.

1. Origin

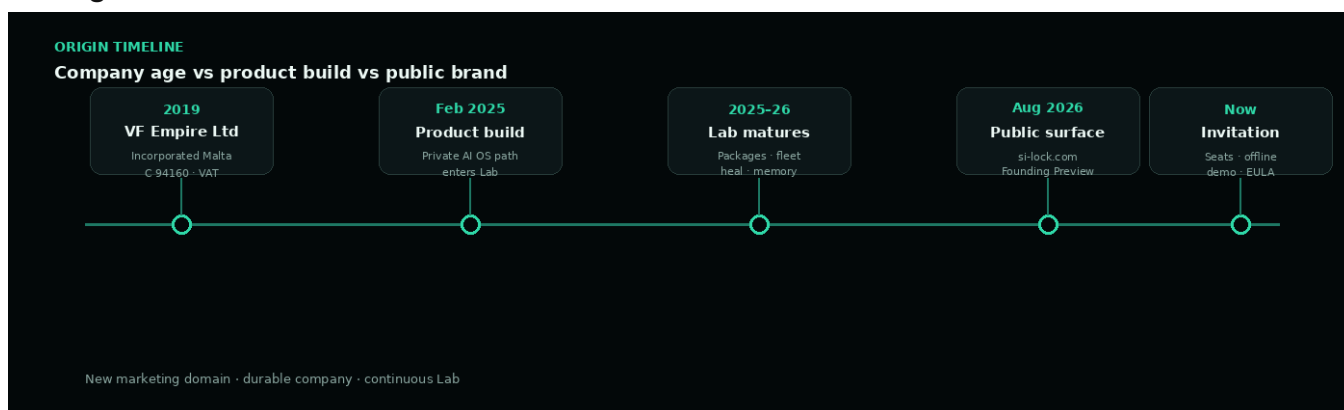

Figure 1 · Origin timeline.

VF Empire Ltd has been a Malta company since **2019** (C 94160, VAT MT26384195). The private AI OS path that became **SILOCK** entered active Lab build in **February 2025**. The public marketing domain arrived in **August 2026** as Founding Preview. New site. Old company. Long Lab.

Most AI on the desk still means a browser tab rented from a data centre. Open-weight models made another path possible: intelligence on metal you own. Packages, hardware floors, update discipline, and a Lab that breaks builds before seats see them: work that started February 2025.

2. What SILOCK is

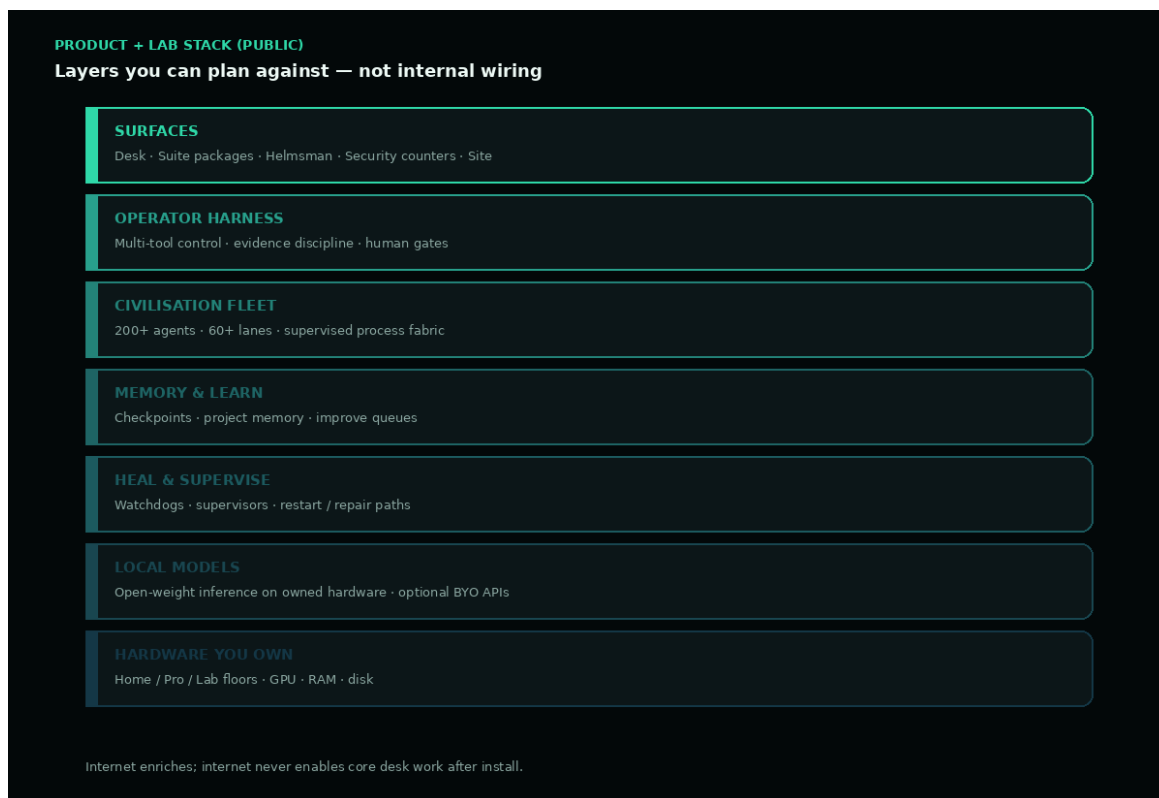

Figure 2 · Public product + Lab stack.

SILOCK is a **private AI operating system layer**: AI-native private desktop path with creative and work packages, plus Helmsman for frontier open models on hardware you own. Default: inference stays local. Optional cloud APIs only with your keys. Updates and licence checks may contact company endpoints (EULA at delivery).

3. The Lab civilisation (backend)

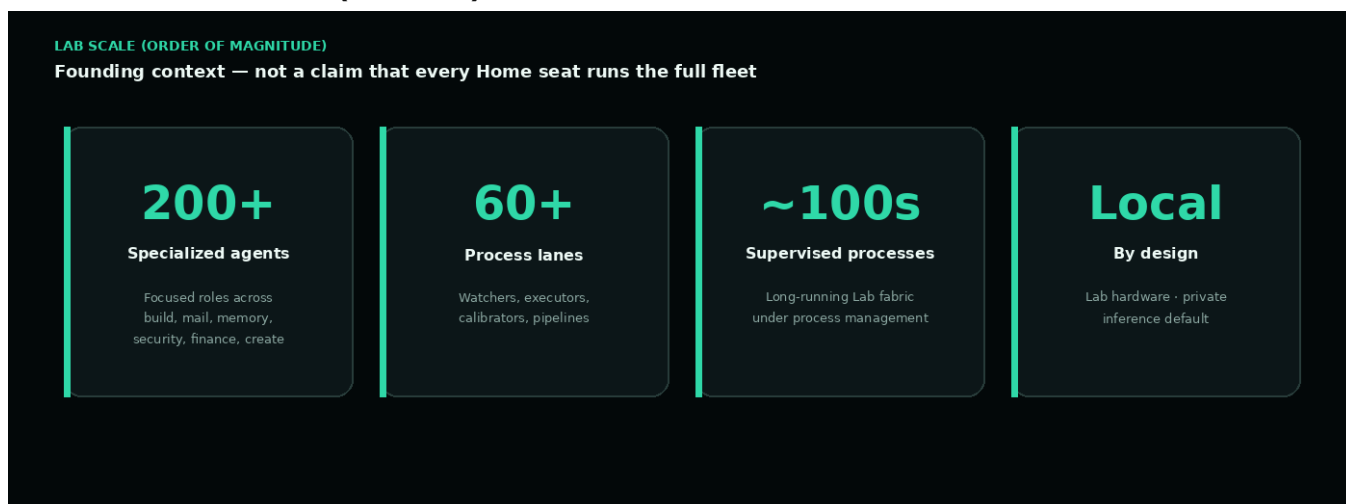

Figure 3 · Lab scale (order of magnitude).

Behind the brand sits a multi-agent operating layer. We call it a **civilisation** because it is not one chatbot with plugins. It is a fleet of specialized workers, long-running processes, memory, and heal loops under operator authority.

Numbers are Lab-scale order of magnitude for Founding context. Home seats do not automatically run the full Lab fleet.

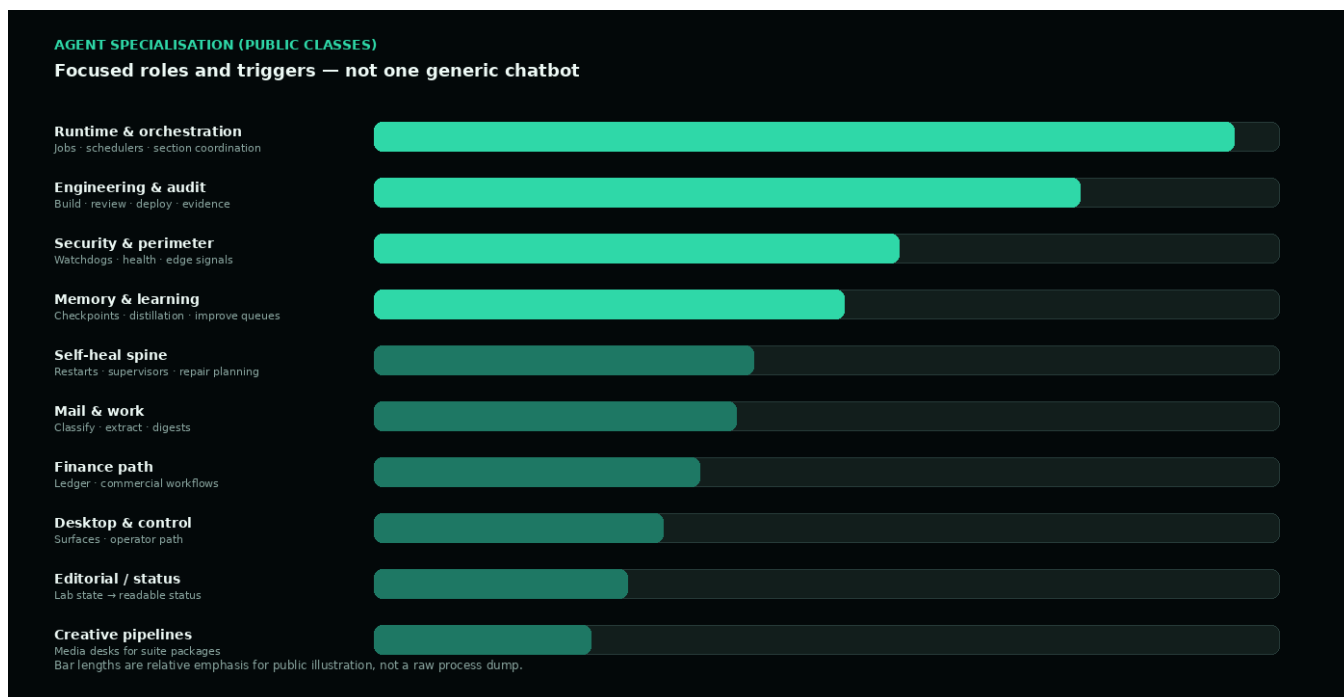

Figure 4 · Agent specialisation classes (relative emphasis for illustration).

Agents have focused roles and triggers across engineering, mail, memory, security, finance, editorial, creative, runtime, and self-heal. Chat is a surface. The Lab is process: long-running workers keep watching whether or not a human is staring at a window.

4. How the organism works

Figure 5 · Civilisation loop · operator principal.

Public loop: **Perceive** → **Plan** → **Act** → **Remember** → **Heal** → **Coordinate**. Principles: internet enriches, never enables; controlled model/tool/memory gates; zero-trust scoped agents; evidence over green badges. The human operator remains principal. The fleet does not outrank the operator.

5. Self-heal, self-improve, learn

Live mechanisms include process supervision, health watchdogs, cell supervisors, crash-path repair planning, and continuous census. Learning is practical: project memory, distillation of failures, improve queues, promotion after success checks.

Honesty: full shadow-test auto-promotion of every patch is architecture target with partial Lab reality. Crash restarts and heal watchdogs are live. High-impact changes stay under human approval.

6. Privacy and network truth

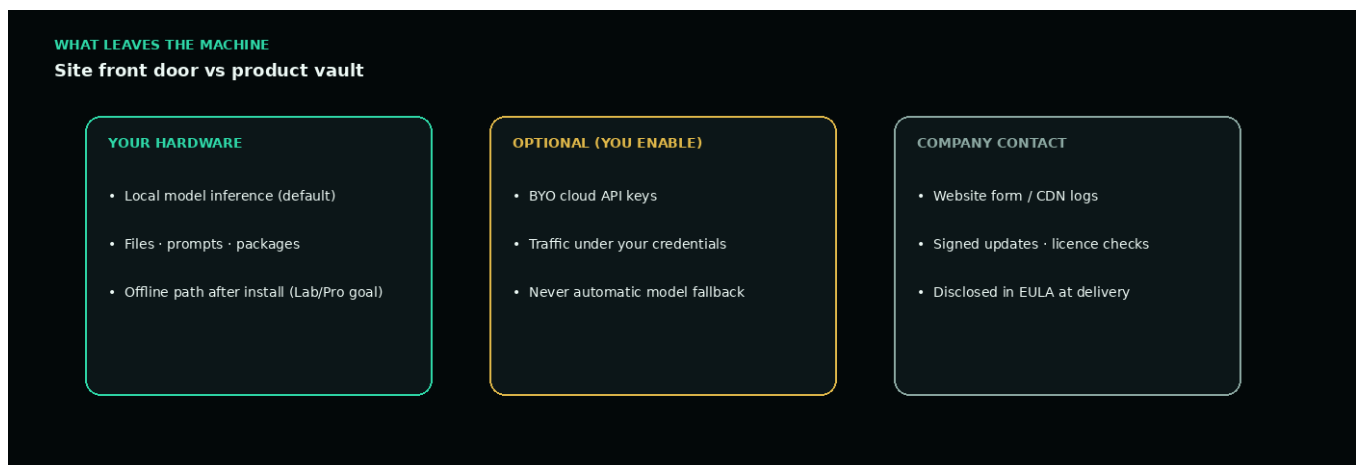

Figure 6 · What leaves the machine.

Website: CDN logs, access-form fields, optional consented analytics. **Product:** local inference by default; no automatic cloud model fallback; optional BYO APIs under your keys; updates/licence checks may contact company endpoints; offline after install is a Lab/Pro design goal. Demand a live offline demo before large payment.

7. What we keep private

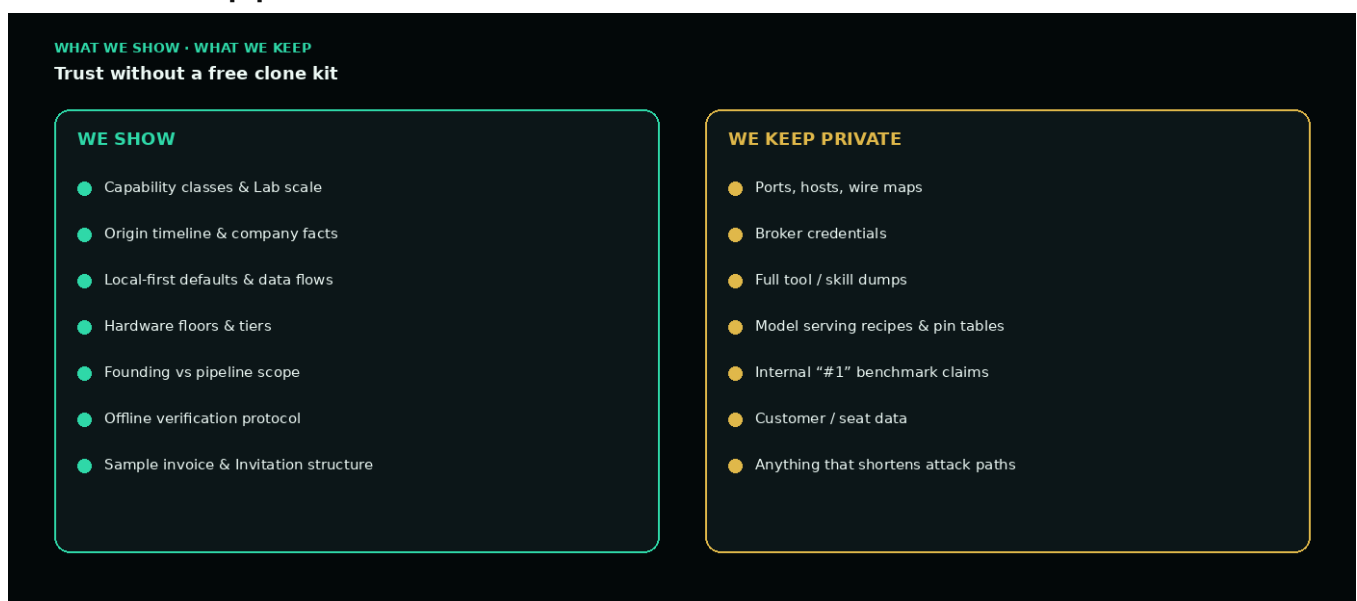

Figure 7 · Show vs keep.

- Ports, hosts, wire maps, broker credentials
- Full tool and skill inventories as a dump
- Exact model serving recipes and pin tables
- Internal #1 benchmark marketing claims
- Customer or seat data

8. Founding Preview scope

FOUNDING PREVIEW vs PIPELINE

What you can plan for now vs still building

IN FOUNDING

- ▶ Local-first OS path
- ▶ Image · Video · Music · Sites · 3D
- ▶ Herald · Transl8 · Billit
- ▶ Helmsman on capable hardware
- ▶ Lab civilisation (public scale)
- ▶ Published hardware floors & tiers

PIPELINE · NOT GA

- Social Centre
- Private feed
- Marketplace
- Wider packaging
- Deeper residency features
- Items labelled building until ship

Figure 8 · Founding vs pipeline.

In Founding: local-first OS path; Image, Video, Music, Sites, 3D; Herald, Transl8, Billit; Helmsman; Lab civilisation at public scale; floors and tiers. **Pipeline (not GA):** Social Centre, private feed, marketplace, wider packaging. No website checkout. Contract = Invitation + acceptance + EULA.

9. How to verify

- Malta Business Registry: search C 94160
- si-lock.com/trust — company facts, before-you-pay, offline protocol
- si-lock.com/story · si-lock.com/lab · si-lock.com/whitepaper
- si-lock.com/legal/sample-invoice.pdf
- info@vfempire.com — live demo and written Invitation
